Title: Organization (Variation A)

Duration: 2m 00s (**214** words; 203 words + 11w Bridge)

Script Content:

[Intro]

Welcome to this practice. Today we will explore the concept of Organization.

Life can be demanding, often requiring us to manage a multitude of complex responsibilities—day in, day out.

Life is busy. We navigate many tasks every single day. Sometimes, we just react to whatever is directly in front of us. We call this being "scattered." This means we only apply partial efficiency.

We are physically performing our duties, but the underlying structure is missing. Occupied with immediate reactions. Often jumping randomly from one problem to the next. This is entirely natural when systems become overloaded.

But we can learn to troubleshoot this scattered, disorganized state.

You can learn to connect with logical order, by engaging your analytical mind.

We audit our systems, practicing what it is like to be systematic about how our processes are structured.

When we run this audit, we activate the ability to actively categorize and manage what is going on.

This does not mean we must complete all our tasks right now, or even fix every problem today. It is about being more prepared for our responsibilities, by acting as the manager of them.

It is an intentional strategy to organize the never-ending busyness of modern life.

[Bridge] Now, we will move into a short practice to explore this.
