Title: Calibration (Variation A)

Duration: 2m 00s (**221** words; 210 words + 11w Bridge)

Script Content:

[Intro]

Welcome to this practice. Today we will explore the concept of Calibration.

Over time, all instruments lose their accuracy. A scale starts to drift. A lens goes out of focus. Our body and mind are no different. We become desensitized to the signal, or our internal readings shift without us noticing. We lose our baseline. If we do not correct this drift, our perception becomes unreliable.

Calibration is the act of resetting a system to a precise standard.

Think of a musician tuning a string instrument. They do not simply hope the string is correct. They test it. They pluck the string and measure the vibration. If it is too loose, the note is flat. If it is too tight, the note is sharp. They turn the peg to increase or decrease the tension until it matches the exact frequency required. They are not playing a song; they are preparing the instrument.

When we practice Calibration, we apply this exact mindset. We do not just go through the motions. We actively check our technique against a clear standard. Are we operating efficiently? Is our alignment correct? We make deliberate, practical adjustments to correct any errors and return to a neutral baseline. We ensure our technique is accurate before we proceed

[Bridge] Now, we will move into a short practice to explore this.
