Title: Patience (Variation B) with Mindful Walking

Timing Audit:

- **Total Duration:** 12m 00s (**935** words; 208 Intro + 11 Bridge + 709 Practice)
- **Intro + Bridge:** 2m 00s (**219** words; 208 words + 11w Bridge)
- **Practice:** 10m 00s (**709** words)
- **Silence:** 135s total (3 Long, 3 Short, 1 Final)

Readability: Grade 6

Script Content:

[Intro]

Welcome to this practice. Today we will explore Patience.

Often, patience is misunderstood. We might think it means waiting passively, until we get what we want. We might think it means forcing ourselves to move slowly. But true patience is not about slowness. It is about presence.

In our daily lives, we often treat the present moment like an obstacle. We treat it like a waiting room that we need to escape so we can get to the "good part" later. We spend most of our time leaning forward. We are physically here, but our minds are already five minutes in the future.

This constant rushing creates a feeling of tightness. It feels like we are fighting against time itself. Patience is simply the willingness to stop fighting. It is the ability to be fully here, even if things are moving fast.

It is about letting things unfold at their own natural pace. When we embody patience, we stop trying to fast-forward our lives. This quality offers a different way to relate to our experience. Instead of constantly leaning into the future, we settle back into the moment. We stop treating the present like a problem to be solved. We simply acknowledge that we are here, right now.

[Bridge] Now, we will move into a short practice to explore this.

[Practice]

When you're ready, let's begin this practice.

Today we'll explore walking with awareness. This practice can be an opportunity to connect deeply with the body and with the present moment. It is best to start this practice in a quiet space, like your home, but you can carry this awareness wherever you are walking.

You may find habits of hurrying or rushing showing up while walking. This is helping you become aware of those patterns, and choosing how you respond. Each time you notice this, you can gently invite yourself back to the rhythm of walking, one step at a time.

[Short Pause] (10s - Initial centering)

Before beginning, take a moment to check the space where you'll be walking. Ensure that the area is safe and free of obstacles, allowing you to walk without risk of tripping or bumping into anything. This practice can be adapted to a hallway, a quiet room, or outdoors, wherever you can take several steps comfortably. Trust your own judgment to maintain safety, moving

at a pace that feels steady and balanced. If you are in a smaller room, simply walk a few steps, turn naturally, and walk back.

When you're ready, begin by standing with the feet flat on the ground, weight evenly distributed, the posture steady and relaxed. Let the arms rest by your sides. Feel the bottoms of the feet touching the floor or ground, noticing the points of pressure and the way your body balances over them. Invite a sense of curiosity about what else may be felt by the feet: if there are socks, shoes, warmth, coolness, whatever may be present in this moment.

Taking care of balance, shift the weight to one side. Then lift the other foot off the ground, move it forward a comfortable amount, and then place it on the ground ahead. Feel what it's like to be walking normally, get to know it: shifting the weight forward, lift the other foot, and step forward with equal care. Observe how the leg muscles engage and release with each step, the movement of shifting the body's weight.

[Short Pause] (10s - Finding the gait)

Continue walking, not having to get anywhere, not having to rush. Notice the subtle rise and fall of the body with each step. The arms may swing lightly, the spine may sway slightly, and the feet make contact with the floor in a steady rhythm. With each repetition, the mind may wish to hurry. Each time this happens, gently return focus to the step beneath your foot, the movement of your legs, and the natural pace of walking.

As you continue walking, notice small differences between steps. One foot may feel heavier. A leg may hold more weight. Your posture might shift. Simply notice these differences. Appreciate the adjustments the body makes naturally. Step by step, allow your awareness to stay with the movement.

[Long Pause] (30s - Continuous walking practice)

Continue with an intentional, regular pace, pausing whenever you choose. Allow your attention to move with the body: lifting one foot, transferring weight, and placing it carefully. Notice the motions in the ankle, knee, and hip that allow balance to be maintained. Observe and feel how the body coordinates movement.

Notice the motions: shifting the weight, lifting a foot, moving it forward, and placing it before shifting the weight again. Stand still for a moment. Notice your feet pressing into the floor. Feel your legs supporting you and your body standing tall.

[Long Pause] (30s - Mechanics of movement)

Continue walking, alternating movement and brief stillness. Maintain focus on the shifting weight, the rolling of the feet, and the gentle engagement of leg muscles. Each step is complete; each pause is an opportunity to deepen presence. Return attention to the body whenever the mind begins to wander.

[Long Pause] (25s - Deepening presence)

Now, stand still for a short time and let your body settle. Feel your feet on the ground and notice how the floor supports your weight. Notice your spine and how you stand tall while balancing with ease. Feel the pressure on the bottoms of your feet and the strength in your legs that keeps you steady.

[Short Pause] (10s - Transition to stillness)

As this practice ends, let all your movements stop. Stay still for a moment longer, feeling grounded and present. Bring your attention one last time to the weight of your body and the balance that holds you here, right now.

[Pause] (20s - Final integration)

Thank you for your practice.
